PROFESSIONAL SUMMARY

Front-end Engineer with 4 years of experience in the React/TypeScript ecosystem. Maintainer of an open-source library with ~102 stars distributed via the shadcn registry (guarhooks — 50 React hooks) and contributor to a production design system (StencilJS/Storybook). Specialized in rendering performance (Core Web Vitals: LCP, INP), scalable component architecture, and Shift-Left testing strategies (TDD/BDD). Experience delivering under feature flags for controlled iteration in production.

CORE COMPETENCIES

React Architecture | Design Systems (Storybook) | Performance / Core Web Vitals | SSR/SSG | Shift-Left Testing (TDD/BDD) | Accessibility (a11y/ARIA) | Feature-flag Delivery | Scalable Componentization | CI/CD

TECHNICAL SKILLS

- **Front-end:** React.js, Next.js, TypeScript, JavaScript (ES6+), HTML/CSS, Tailwind CSS, Framer Motion, Vue, offline-first PWA;
- **State & Data:** Zustand, Context API, Axios, RESTful API consumption, real-time communication (WebSockets/SSE);
- **Design Systems:** Storybook, StencilJS (Web Components), shadcn package registry, component library engineering, content-collections;
- **Testing:** Vitest, Jest, Testing Library; TDD and BDD methodologies;
- **Performance & Quality:** Core Web Vitals (LCP, INP, CLS), SSR/SSG, accessibility (a11y/ARIA), Lighthouse audits;
- **Build & CI/CD:** Vite, GitHub Actions, GitLab CI/CD, Argo CD, Docker;
- **Back-end (supporting):** Node.js, Express.js, NestJS, Flask; authentication (OAuth 2.0, JWT); PostgreSQL, Redis;
- **Architecture & Tools:** SOLID, MVVM, MVC, GitFlow, Figma, Cursor IDE.

PROFESSIONAL EXPERIENCE

Software Engineer (Front-end), Zenvia — 08/2023 – Present

- **Design System:** Contribution to the company design system in StencilJS (Web Components), using Storybook for isolated component development and documentation;
- **Ownership & Growth:** Full ownership, from scratch, of the ZCC ↔ Mercado Livre messaging integration (Q&A, post-sale support, complaints). Delivery of ZCC integration interfaces with ERPs (Bling, Tiny, Omie, Microvix) under feature-flag-controlled rollout (Canary), with per-client versioned exposure and an expand/rollback loop driven by product-team metrics;
- **Performance:** Core Web Vitals optimization in production (field metrics): LCP reduced from 2.91s to 2.35s and INP from 275ms to 199ms, both moved from the "needs improvement" range into "good", via rendering refactor in React.js with the MVVM pattern.

Front-end Developer, Catency (Freelance / Contractor) — 04/2023 – 03/2025

- **Context:** Engineering of high-conversion landing pages and institutional websites;
- **Architecture:** Development with Next.js and Tailwind CSS applying hybrid rendering (SSG/SSR) for indexing control (SEO) and static-asset delivery optimization. "Pixel Perfect" implementation with full responsiveness and Cumulative Layout Shift (CLS) mitigation. Continuous Lighthouse audits for performance and accessibility (a11y/ARIA);

- **Impact:** Delivery of 5 platforms with consistent LCP < 2.5s and Core Web Vitals thresholds met for strong organic indexing.

Full-stack Developer, Umbler — 02/2022 – 04/2023

- **Context:** Creation of internal tools for Customer Success operations and portfolio management;
- **Architecture:** End-to-end development with .NET and Blazor. Customization of the Bootstrap library as the standardized Design System across internal systems;
- **Impact:** Enabled process documentation, learning tracks, and automated management of a 100,000-client base.

PROJECTS & OPEN-SOURCE CONTRIBUTIONS

Guarahooks

- Open-source library with 50 React hooks, ~102 GitHub stars, distributed via the shadcn registry and with a CLI published on npm ([guara-cli](#)). Documentation ecosystem integrated with content-collections;
- Maintenance of code consumed by third-party applications.

Enterprise React Architecture

- Reference implementation for mission-critical React applications. "Shift-Left Testing" approach with TypeScript, Vitest, and React Testing Library, applying TDD/BDD to validate complex UI domains;
- Scalable model enabling zero-regression deployment pipelines.

MagicUI

- Development of 5 visual components with React.js, Tailwind CSS, and Framer Motion. Lazy Loading and memoization (useMemo, useCallback) for bundle and component-lifecycle optimization.

Distributed Systems Lab

- Real-time analytics dashboard (Next.js, Socket.io, Zustand) sustaining smooth rendering at 60 FPS under high-frequency WebSocket events.

EDUCATION

- **Postgraduate, Software Engineering** — in progress (started 2026);
- **Systems Analysis and Development** — Centro Universitário União das Américas Descomplica (2023 – 2025, completed);
- **Internet Computing (Technical)** — Instituto Federal Sul-rio-grandense (2018 – 2022);
- **Continuing education:** curso.dev (in progress).
